

## Wednesday Challenge Form

Group Members: Jonathan

Problem Statement: To make a boat out of graph paper. The boat had to float for 5 minutes, and you can choose a weight to put on

Approach: Our original design was to make a regular paper boat, but it did not support any weight. Our next design was to just put a piece of paper on the water and it lasted the whole 5 minutes.

Solution: Mason and Raul's group won.

Lessons Learned: To put more weight on the paper because it could've lasted longer.
