

Date:

Wednesday Challenge Form

Group Members: Krish, Derek, and Andrew

Problem Statement: Decide whether or not to take your math class for the whole school year or write the numbers out from one to 1,000,000

Approach: We figured out how many words we would have to write a day first. That number came out to 5,555/ day. Then we found out how many per hour= 370ish if you were awake for 15 hours. Then we found out per minute, and it turned out to be around 69 per minute. We decided to write.

Solution: Two groups won. David's and Alvin's

Lessons Learned: To make better decisions or explain our decision better.
