

Date:

Wednesday Challenge Form

Group Members: Paul, Zach, Jon, and Jacob

Problem Statement: Make a boat fin for the tail of a rocket. Make it out of cardboard and some sort of adhesive. Who ever had the smoothest one wins.

Approach: We had different circles, each one with a larger diameter. There were smaller circles inside of the bigger ones that also got bigger as the circles grew. On Thursday Jacob was not here and we realized that we were in trouble.

Solution: Don't know yet

Lessons Learned: To not rely too heavily on one person
