

Date: 11-9

Wednesday Challenge Form

Group Members: Mason, Aren, and Justin

Problem Statement: We had to determine which object was 1kg and then find the ratio of the object that wasn't 1kg to the object that was 1kg.

Approach: We determined which object wasn't 1kg by feeling with our hands. We found the ratio by borrowing other groups bags it would take to make the weights of the objects feel equivalent

Solution: We lost the Wednesday Challenge because Tyler presented in front of the class How the scales, so they automatically won

Lessons Learned: To be braver and share our ideas in front of the class
